

Assignment-5

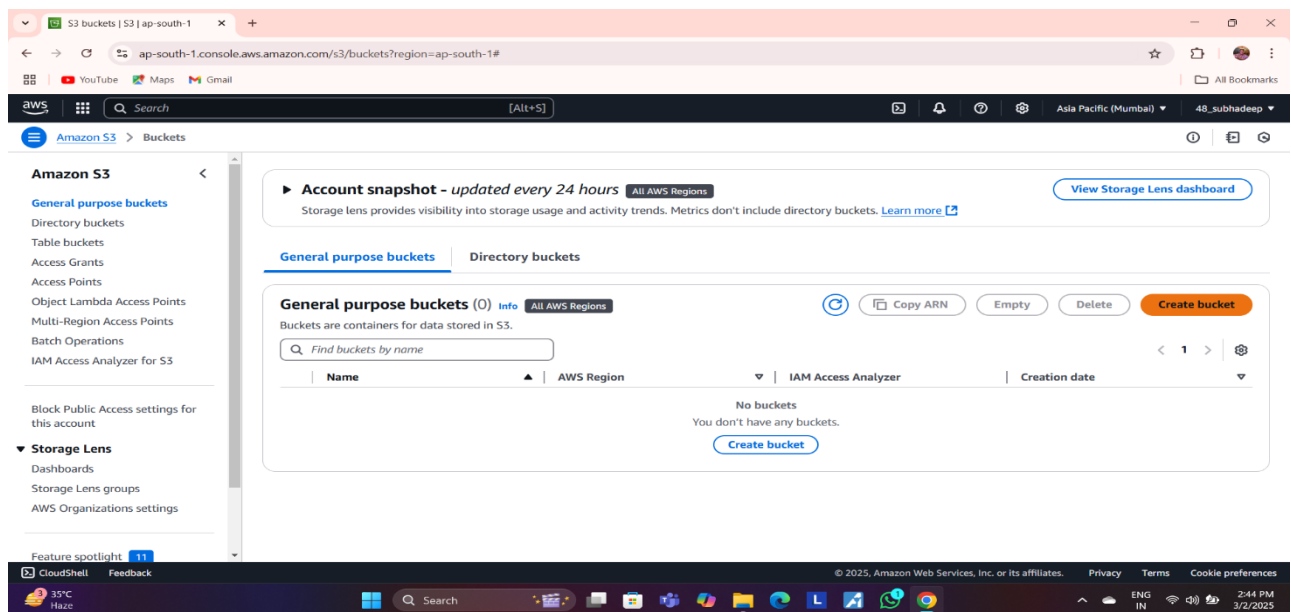

Problem Statement: Create a public Bucket in AWS. Upload a file and give the necessary permission to check whether the file URL is working.

The steps are as follows: -

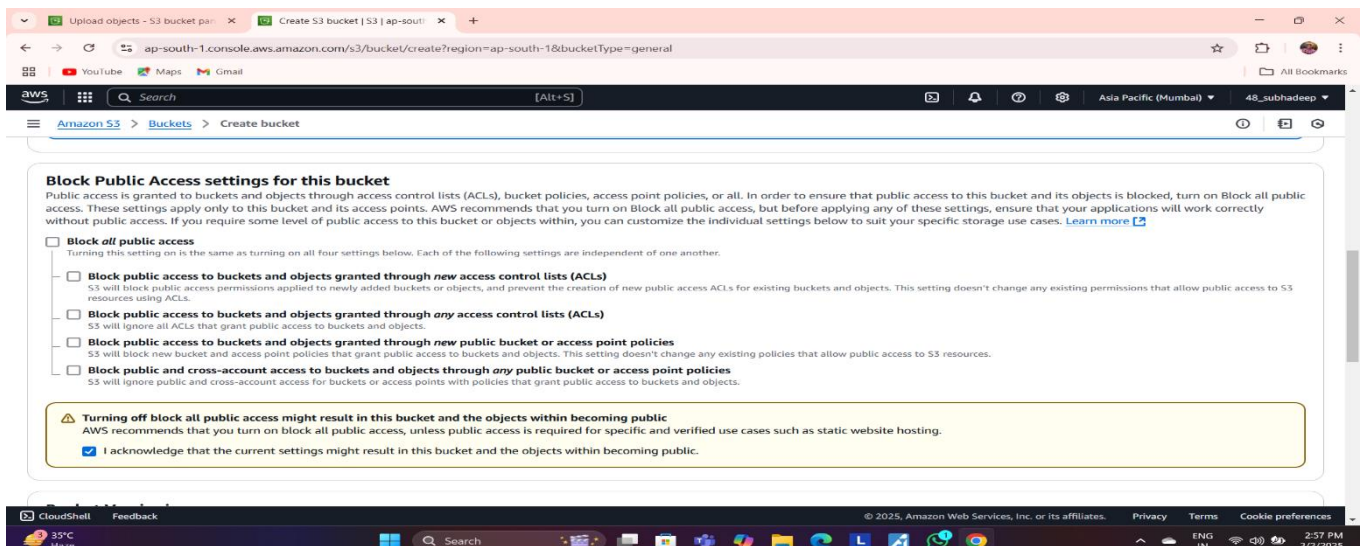

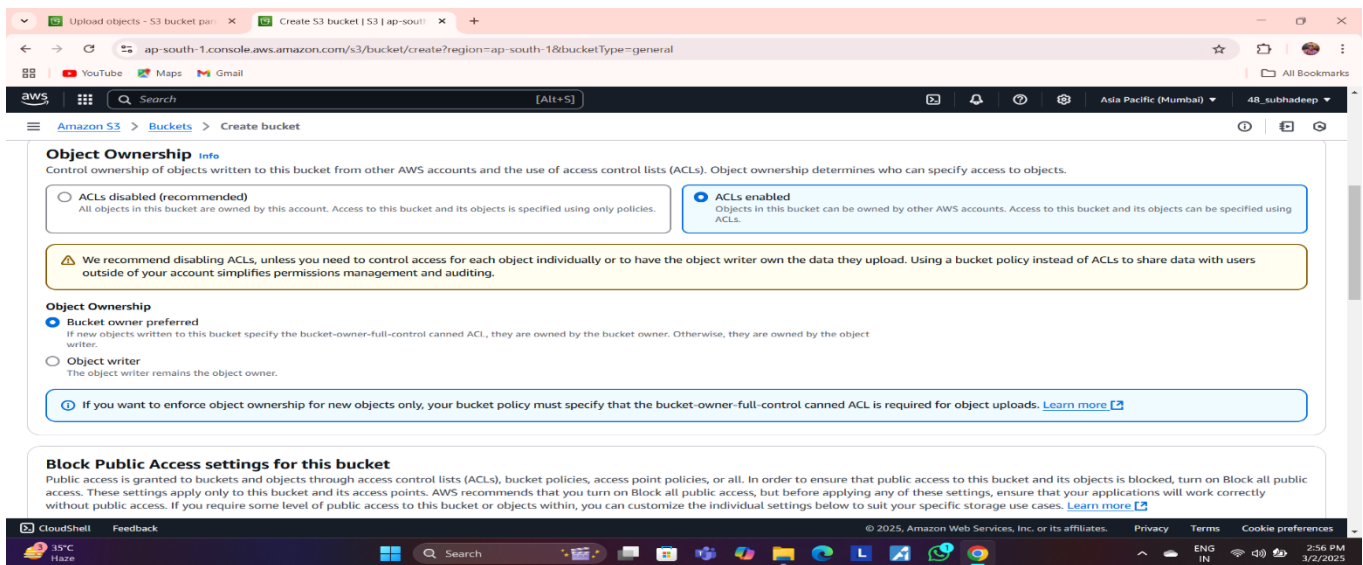

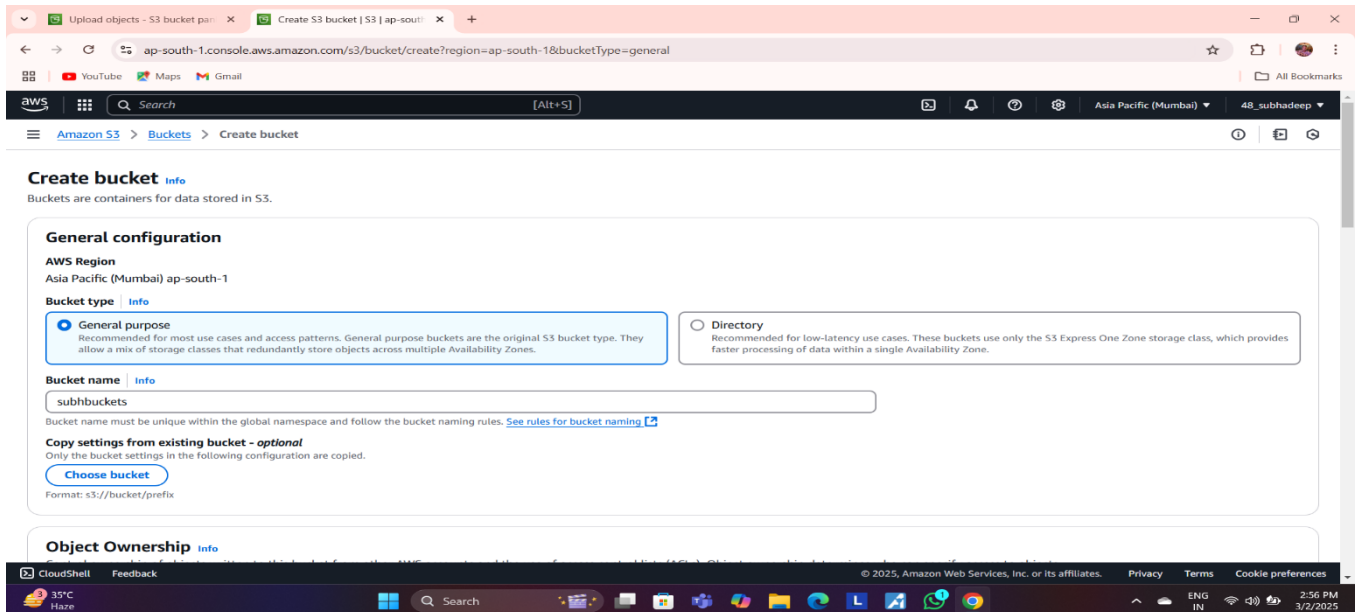

1. Access the AWS console, search for S3, and select the top option from the search results.

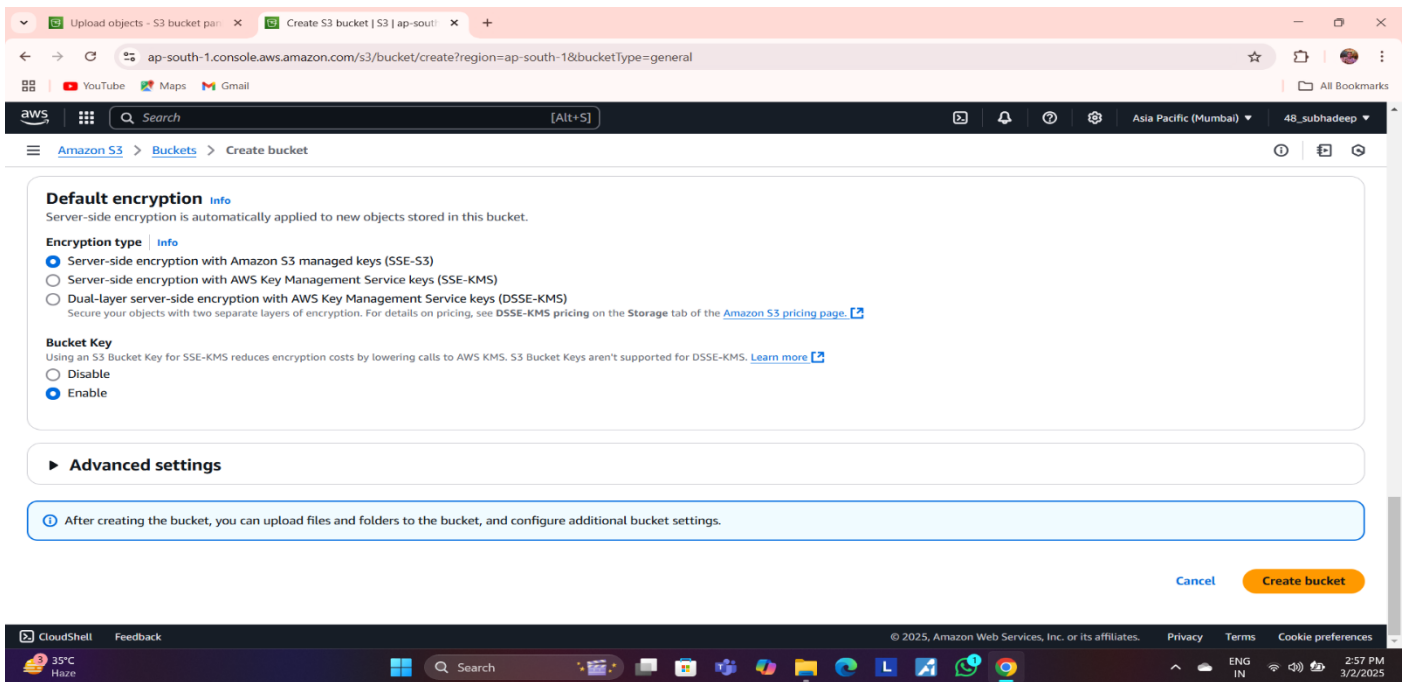

2. Click on 'Create bucket'.

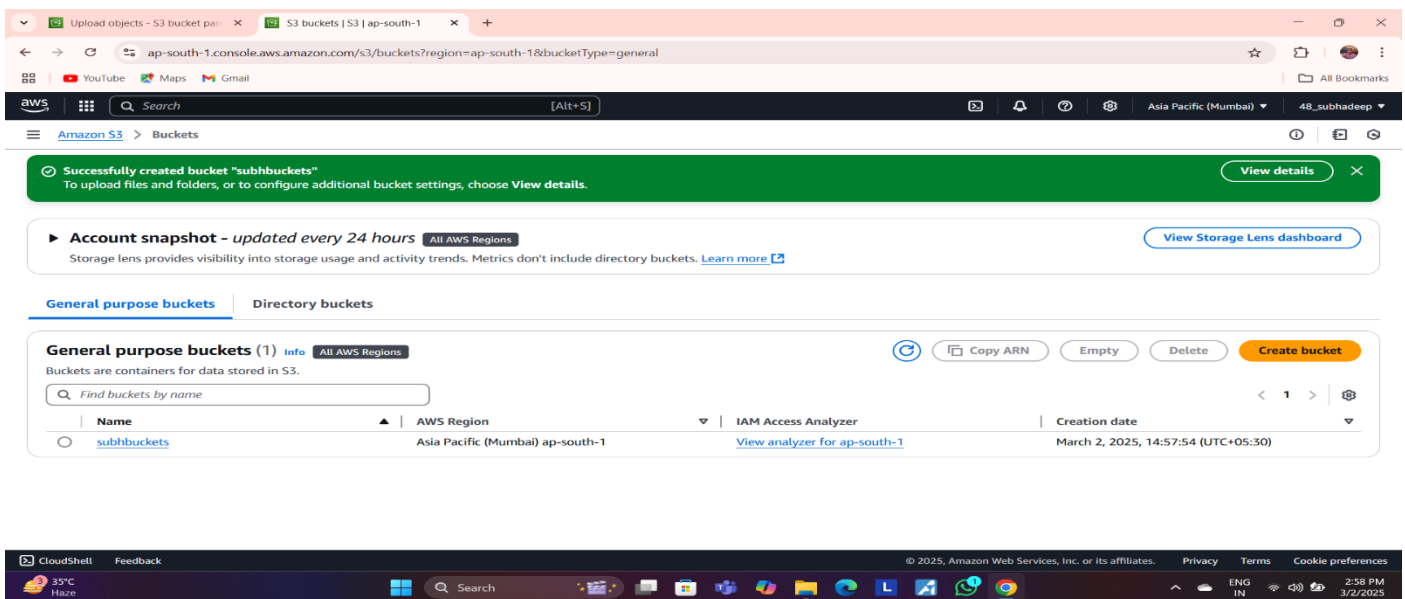

3. By default, the Object Ownership is set to 'ACLs disabled' in this window. Select 'ACLs enabled' since we are creating a public bucket. . Now, uncheck the box for 'block all public access'. At the bottom of the window, check the box confirming that the current setting changes may result in a public bucket. And Scroll down without any further modifications and proceed to click on 'Create Bucket'.

4. Now, without making any additional modifications, scroll down and proceed to click on 'Create Bucket'. A green coloured pop-up dialogue box shall confirm the creation of our bucket. It shall also be displayed on the bucket list.

5. Now click on the bucket name. Choose the 'Upload' option, which will lead to the opening of the subsequent window. From there, click on 'Add files' and proceed to upload your desired file(s) into the selected bucket. Scroll down and proceed to click on 'Upload'. The notification confirms that the file has been successfully uploaded.

6. Now, click on one of the uploaded file, then 'Copy URL'.

7. Navigate on a new window and paste this URL. An error appears indicating that access to the contents is restricted.

8. Now, for the same file go to permissions. And Edit the permissions as follows:

The screenshot shows the AWS S3 console interface. The left sidebar contains navigation options like 'General purpose buckets', 'Storage Lens', and 'Feature spotlight'. The main content area is titled 'Screenshot (67).png' and has tabs for 'Properties', 'Permissions', and 'Versions'. The 'Permissions' tab is active, displaying the 'Access control list (ACL)' for the object. It lists three grantees: 'Object owner (your AWS account)', 'Everyone (public access)', and 'Authenticated users group (anyone with an AWS account)'. Each grantee has associated permissions for 'Object' and 'Object ACL'.

Grantee	Object	Object ACL
Object owner (your AWS account) Canonical ID: f44f86280219c8d642dc85ca53b0b03e7171a8edd47f0e0796be3d9a4bec158a	Read	Read, Write
Everyone (public access) Group: http://acs.amazonaws.com/groups/global/AllUsers	-	-
Authenticated users group (anyone with an AWS account) Group: http://acs.amazonaws.com/groups/global/AuthenticatedUsers	-	-

This screenshot shows the 'Edit access control list' page in the AWS S3 console. It allows for modifying the permissions for the 'Screenshot (67).png' object. The 'Access control list (ACL)' section shows the current permissions for three grantees. The 'Object owner' has 'Read' and 'Write' permissions. 'Everyone (public access)' has 'Read' and 'Write' permissions, with a warning icon next to 'Read'. 'Authenticated users group' has 'Read' and 'Write' permissions, with a warning icon next to 'Read'. A yellow warning box at the bottom states: 'When you grant access to the Everyone or Authenticated users group grantees, anyone in the world can access this object.' Below this, there is a checkbox labeled 'I understand the effects of these changes on this object.' which is currently checked.

Grantee	Objects	Object ACL
Object owner (your AWS account) Canonical ID: f44f86280219c8d642dc85ca53b0b03e7171a8edd47f0e0796be3d9a4bec158a	☒ Read	☒ Read ☒ Write
Everyone (public access) Group: http://acs.amazonaws.com/groups/global/AllUsers	☒ ⚠ Read	☒ ⚠ Read ☐ Write
Authenticated users group (anyone with an AWS account) Group: http://acs.amazonaws.com/groups/global/AuthenticatedUsers	☐ Read	☐ Read ☐ Write

⚠ When you grant access to the Everyone or Authenticated users group grantees, anyone in the world can access this object.
[Learn more](#)
☒ I understand the effects of these changes on this object.

9. Save the changes made above and once-again copy the URL and search it on a new window only to see it open this time.
